

CS Audit

Auditing & Monitoring for Oracle E-Business Suite

CS Audit for Oracle EBS enables your organization to build the perfect audit trail for all of your critical data.

Change is captured as it happens, and is presented in a format that is easy to understand.

Ensure Accountability

Accountability is essential in today's climate of corporate governance and regulation. Businesses need to be able to account for the state of all of their sensitive and critical data at any time.

Change Management

CS Audit enables you to build-up your documentary evidence directly within the audit trail to help enhance your change management processes.

Real-Time Monitoring

Using CS Audit's built-in notification engine, you can ensure change is monitored in real-time.

Structured

Organize your auditing requirements into a hierarchical structure for ease of maintenance and enquiry.

Database-Wide

Auditing is not limited to Oracle E-Business data, you can audit any data that is accessible from within the database.

Fine-Grained

Audit a single column in exceptional conditions or audit hundreds of columns in all conditions. You have full control over what is audited and under what conditions.

Comprehensive Reporting & Extensible Auditing

CS Audit includes very powerful audit trail reporting and research capabilities to help satisfy auditors. Not only is the data itself recorded during the audit process, you can specify a whole host of other attributes including additional meta-data from other sources at the time of audit to help ensure your audit trail is clear and understandable.
